## Semi-hermetic air-cooled condensing units

For many years, users of Copeland™ semi-hermetic condensing units have relied on Emerson Commercial and Residential Solutions to provide high performance and value to the refrigeration market. Emerson is committed to continuous technical development while maintaining the traditional values of Copeland for refrigeration.

This product selection catalogue provides a complete listing of the semi-hermetic condensing unit range for 50Hz operation.

Long engineering and manufacturing experience have led to these condensing units, produced in one of the most advanced facilities in Europe. They feature excellent quality and are traditionally well known in the refrigeration industry.

### Range

Three versions are available:

1. **Two-stage units** for very low temperature applications, units with 2-stage compressors in the range of 15 to 30 hp are available.

2. **High efficiency Copeland Discus™** units featuring Discus™ valve compressor technology, covering models from 5 to 40 hp. These units are specifically suitable for those applications where high efficiency is required.

For R22 low temperature applications, a liquid injection system is required (Demand Cooling). Condensing units available with this system are indicated by “DC” in the nomenclature.

3. **Standard units** from 0.75 to 15 hp, economically priced and based on K, L, 2S and 3S compressors, using reed valve technology. Models from 2 hp and above are also available with a large sized condenser (from 3 hp with twin fans), suitable for extreme conditions like high evaporating and/or high ambient temperatures. All units are fit for both medium and low temperature applications. For R22 low temperature applications, 3S compressors are supplied with a discharge gas temperature protection valve (DTC).

**Note:** Units with compressors 2S and 3S are only available for R404A, R134a, and R22. Models rated for R404A may also be applied with R507. In this case, multiply stated cooling capacity by 1.03 and power input and motor current by 1.02.

Models supplied with ester oil are capable of operating with R404A, R507, R407C, R407A, R134a or R22, thus suitable for a broad range of refrigerants and applications.

### Standard equipment

#### Compressor

- Single-phase motor with thermal overload protector
- 3-phase motor protected by thermistors in motor windings and overload protector in the terminal box

All compressors are suitable for direct starting. To reduce inrush currents, motors for part-winding start are available on all Discus units and on standard units of 7.5hp and above. An unloaded start device is available as option for all units with part-winding start motors.

**Safe Lubrication** is another key feature available with the compressors. K and L ester oil models (identified by an “X” in the model designation) incorporate an internal oil pump to enhance durability particularly in R404A applications. Standardizing all ester oil models with this improvement permits their universal application with R404A, R22, R407C, R134a and R507. In addition, standard air-cooled compressors with splasher lubrication are available for mineral oil applications only. An oil pressure switch is not required with air-cooled models.

#### Condenser

- Copper tube
- Steel frame with fan base

#### Receiver

- With CC and UDT approval
- Sight glass with receivers from 11.7 onwards
- Equipped with Rotalock valve and pressure relief valve connection

#### Fan motors

- Thermally protected, single-phase fans
- Z-12 comes with three-phase fans
- Run capacitor mounted and wired into terminal box

- Applicable for fan speed control
- Maintenance free

**CoreSense™ technology** unlocks advanced diagnostics, protection and communication capabilities. With in-depth system information, technicians can make faster, more accurate decisions resulting in improved compressor performance and reliability.

For all 4M and 6M models, CoreSense will be supplied as a standard.

**High / low pressure switch** with automatic reset

**Differential oil pressure switch (OPS2)** for all S and 2D/3D models.

#### Electrical box

Applied on twin fan models as well as on all single-phase and three-phase versions. The single-phase equipment for compressor and fan is mounted and wired in the terminal box for easy installation.

#### Protection (class)

- Compressor, fan and differential oil pressure switch IP54
- High / Low pressure switch IP44
- All condensing units are supplied with a holding charge

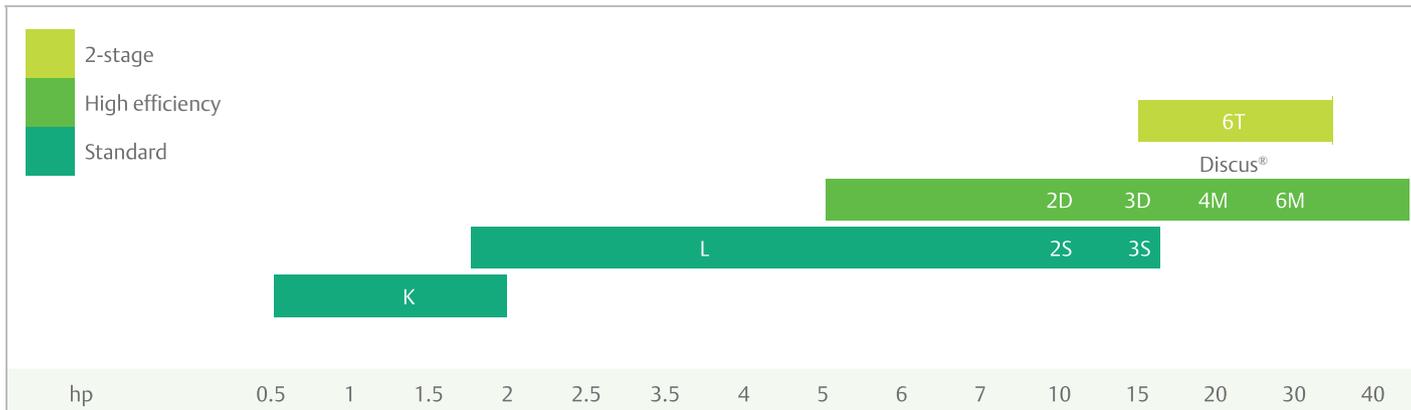

### Optional accessories\*

- Crankcase heater
- Unloaded start
- Filter drier
- Sight glass
- Suction accumulator
- Oil separator

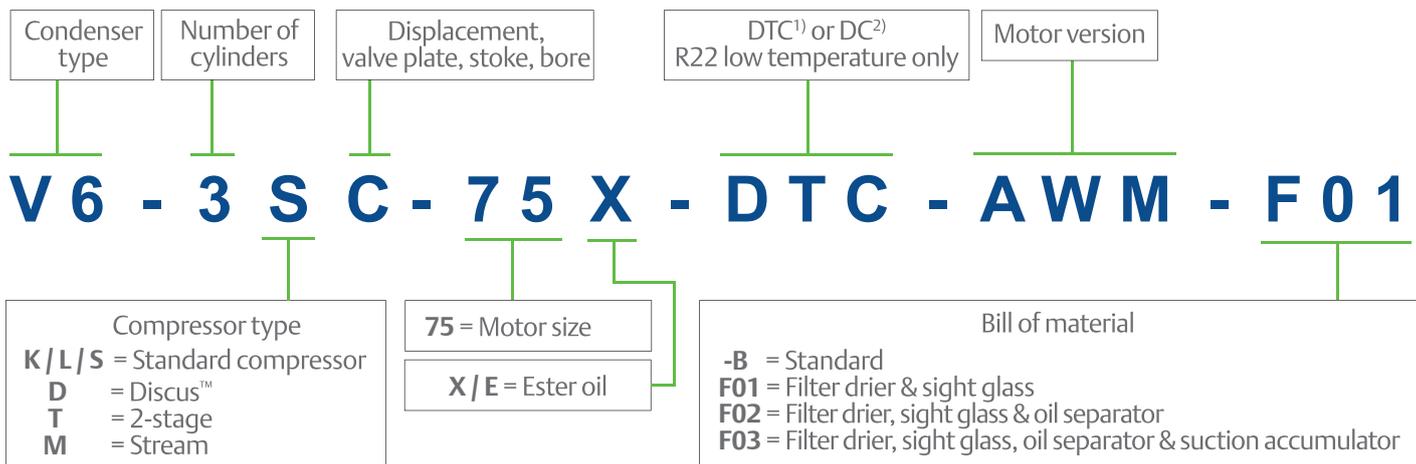

\*The two-stage units with Z9 and Z12 condenser come with crankcase heater, oil separator, suction accumulator, liquid line with replaceable core filter drier and moisture indicator, differential oil pressure switch (OPS2), discharge line check valve, vibration absorber and sub-cooler assembly with integrated filter drier, moisture indicator, solenoid valve and expansion valve as a standard.

# General information

## Product range

## Nomenclature

<sup>1)</sup> DTC: Discharge gas temperature protection valve  
<sup>2)</sup> Demand cooling

## Maximum permissible operating and off-cycle pressures

Particular attention must be paid to the vapour pressures resulting from the ambient temperature (especially at standstill). The limits permitted for the compressor and other system components must not be exceeded.

The maximum operating pressures for each model are indicated on the corresponding data sheets and on the name plates. The condensing units must only be operated in the operating ranges approved.

## Maximum operating pressures

Suction side = 22.5 bar gauge  
(only during standstill)

Discharge side = 32.5 bar gauge

## Refrigerant oils

Mineral oils are not miscible with HFCs, and thus cannot be used with HFCs. With HFC refrigerants, polyolester-lubricants (POE) must be used. However, handling these lubricants requires extra care to ensure the long life of the equipment.

Only the following oils are approved for use with R404A, R507, R407C, R134a, R22, R407A or R407F.

## Lubricants

ICI        Emkarate RL 32CF  
Mobil     EAL Arctic 22 CC

### Speciality of POE oil

The residual moisture in the installation must be below 50 ppm, and should be verified after 48 hours of operation. To achieve this, it is necessary to install a properly

## Compressor motors

Motor code	Power supply	Connection
Code	V(+/-10%) / ~ / Hz	
EWL ++	380-420 / 3 / 50	Y
AWM	380-420 / 3 / 50	YY/Y

YY/Y - Part winding start ratio is 2/3 : 1/3

## Fan motors

Fan motor Ø, mm	Voltage V (+/- 10%) / ~ / Hz	Run capacitor µF / V	Power input W	Motor current A
300	230 / 1 / 50	2.5 / 450	85	0.38
350	230 / 1 / 50	4 / 450	110/130	0.45/0.6
420	230 / 1 / 50	7 / 400	235/280	1.15/1.25
500	230 / 1 / 50	10 / 450	400/570	1.85/2.48
500	400 / 3 / 50	-	690	1.35

dimensioned filter drier suitable for the respective refrigerant in each system. The correct evacuation techniques are required when commissioning or servicing the refrigeration system.

## Oil identification

Condensing units designed for operation with R404A, R507, R407A, R407C, R134a or R22 are factory supplied with one of the approved oils and are suitably identified in several locations to prevent unauthorized lubricant oils from being filled into the system:

- The last figure in the motor size designation is replaced by an "X" in case the compressor contains POE oil.
- A sticker is attached to the compressor close to the oil filler neck.
- In addition to these identifications, the user must mark the refrigerant used in the system on the name plate.

## Cooling capacity

The capacity data was compiled according to EN 12900 and is valid for 50 cycles (Hz) operation.

20K Superheat

Q = Capacity in kW  
P = Power input in kW  
Rating at: 20°C Suction gas return, 0K Subcooling

\* At 3K Subcooling, capacity increases by approximately 5%  
\* Stated power values are inclusive of fan power

# Additional application guidelines

## **Vibrasorber**

Wherever Vibrasorber is used please ensure that this is connected in parallel to compressor crankshaft. Connecting in other orientations could restrict the compressor movement and might lead to increased vibration and leakage.

## **Condensing unit on rubber pads**

Please ensure that the condensing units are mounted on the rubber pads and not mounted directly on the concrete platform or welded directly on any frame.

## **Auto cycling HP cutout**

As our condensing units are provided with Auto reset HP cutout, please ensure that the controller used in the system counts number of trips through HP within the span of time and if this exceeds the limit, the controller needs to trip the system to safe guard the compressor. Frequent cycling also leads to oil getting pumped out of the compressor and not sufficient time given for the oil to return back and this might lead to lubrication failure.

## **Continuous pump down cycle**

Wherever Pump down cycle is provided, please ensure that this is of one time pump down cycle. In case of continuous pump down, any minor leakage in the liquid line solenoid valve or system with larger refrigerant charge might lead to frequent cycling of compressor during thermostat OFF cycle.

## **HP / LP cutout adjustment**

Our HP / LP cutout is with the factory preset values. Please ensure that these are adjusted as per the application requirement. The adjustment stopper needs to be removed before the adjustment and to be fitted back in to the cutout for proper operation of the cutouts.

## **Compressor spring adjustment**

Please remove the transportation clamps and adjust the mounting spring height before starting up the condensing unit.

## **Disclaimer:**

Technical data given was correct at the time of printing. Products, specifications and data in this literature are subject to change without prior notice. Updates will be done periodically. Should you need clarification of a specific data, value or information, kindly contact Emerson representative.
